Entries data Schema

The entries data schema is linked to the attraction schema. This schema lists the data structure of attraction entries. The schema definition distinguishes between required and optional fields. Required fields are used in either benchmark calculations or in analytics.

Entries Tables

- Entries
- Metadata

Entries

Each record in the entry log represents a single entry to an attraction or similar venue.

Field	Data type	Definition	Required
attractionId	string/guid	Unique attraction identifier	Yes
entryDateTime	DateTime	Timestamp of the entry in ISO 8601 format (yyyy-MM-ddThh:mm:ss)	Yes
iD	Guid/int	ID or TransactionID id a unique transaction identifier	Yes
entryTicket	String	Name or label of the ticket used for entry	Yes
entryTicketType	Struct	Structured object describing the ticket type (e.g., Annual pass, Ticket)	Yes
numberOfGuests	Integer	Number of guests entering with this ticket	Yes
productNumber	Integer	Reference to a ticket or product dimension table (e.g., product ID)	No
reentry	Boolean	Indicates if this is a reentry (true or false). Default is false	No
ticketId	Integer	Unique identifier for the ticket or annual pass	No

Notes for Integration Partners

- **DateTime Format:** Ensure all timestamps are in UTC or clearly specify the timezone.
- **Reentry Flag:** Useful for distinguishing between single entries and repeat visits on the same day.
- **productNumber vs ticketId:**
 - productNumber is used for dimensional lookups.
 - ticketId is a unique transactional reference. For annual pass entries the ticketId (in this case annual pass ID) is used to calculate the number of entries per annual pass.

The entryTicketType could contain the following values.

entryTicketType
Årskort voksen
Årskort barn
Årskort ledsager
Personale
Billet voksen
Billet barn

metadata

Attraction metadata.

```
{
  "metaData": [
    {
      "attractionId": "123",
      "name": "Attraktion x",
      "municipalityId": "101",
      "capacity": 400
    }
  ]
}
```

Field	Data type	Definition	Required
attractionId	string/guid	Unique attraction identifier	Yes
name	string	Name of the attraction	Yes
municipalityId	integer	Municipality code	Yes
capacity	integer	Attraction capacity. Max visitor capacity, i.e. the maximum number of guests at the attraction	Yes
